

1. Tell me about yourself?

First, I would like to express my gratitude for the opportunity. My name is Taufik Anwar, and you can call me Taufik. I graduated from Polinema with a degree in Informatics Engineering. During my studies, I completed coursework in mobile app development, including Kotlin and Flutter. I also have experience participating in the Google Bangkit program on the Android learning path and gained much knowledge in building mobile applications. I have also had an internship experience at PT PAL Indonesia, which focused on IT support. I gained much experience in computer repair, networking, and dealing with clients from there. Furthermore, my experience organizing workshops and conducting research in informatics has helped me develop my skills in public speaking, analytical thinking, and problem-solving. I have read and understood the requirements listed in the job ad, and with my hardworking attitude and teamwork skills, I can be a suitable candidate for this job. Thank you.

2. Why do you want to work here?

Thank you for the question. After reading this role's requirements and job description, I thought my skills fit the position well. I also researched your company and found that many clients are large companies such as PT Fast Food Indonesia, KFC, Taco Bell, and many more. Additionally, I found on LinkedIn that one of my seniors from the Google Bangkit program joined your company a year ago. If I succeed in this interview, it would be an excellent opportunity for me. Thank you.

3. What are your strengths?

Thank you for the question. I have many positive qualities that make me a good fit for this role. For instance, I am a hard worker, enthusiastic, a great team player, and have excellent communication skills. In addition, I have a range of hard skills that match the requirements. One thing that sets me apart from the majority of employees is my optimistic and creative problem-solving approach. I think it's a valuable skill that many employees should have. Thank you.

4. What is your weakness?

Thank you for the question. To be honest, I consider myself a bit of a perfectionist. While this can be an advantage in many situations, it sometimes means that I spend more time than necessary on a task, trying to make everything perfect. One way to overcome that is by setting realistic goals and timelines for myself and prioritizing tasks based on their importance.

5. What are you see for 5 years?

Thank you for the question. If I am successful in this interview, my first plan is to become competent in this role. With my hard work and teamwork, I believe that I can quickly develop the necessary skills. Once I have developed my skills, I would like to contribute more to my team by helping others, making innovative moves, and more. If there is an opportunity for promotion, I would be happy to hear about it. Thank you.

6. How do you solve your problem?

Thank you for the question. It depends on the problem I'm facing. If it's a small issue, I approach it systematically by first identifying the root cause of the problem, brainstorming multiple solutions, and then selecting the best one. I also evaluate the result to gain insight in case a similar problem occurs in the future. However, if I'm dealing with a bigger problem, I follow the same process but with additional steps. I break the problem down into smaller pieces and analyze each one to determine the root causes.

7. How much salary do you want?

Thank you for the question. Based on my research, the average salary for mobile programmers in Indonesia is around 8 million rupiahs per month. I'm looking forward to joining your team and receiving a salary that matches the company's culture and industry standards. Thank you.

8. Do you have any questions for us?

What are the working hours? And may I know about the company's culture?
